ABSTRACT OF THE DISCLOSURE

A decorative dispenser for dispensing film strips is provided which includes a dispenser having a top surface. The top surface has an opening therein for allowing access to the film strips housed within the dispenser. The decorative dispenser further includes a flip top lid having one end pivotally attached to the top surface of the dispenser and an another end adapted to engage a front portion of said dispenser to sealing close the opening in said top surface of said dispenser, said flip top lid being configured to resemble a tongue. Further, a character, person's, or animal's face (e.g. image of eyes, nose and open mouth) is preferably affixed or placed onto the top surface of the dispenser above the tongue shaped flip top lid to give the appearance as if the tongue lid is part of the above-mentioned face and to give the dispenser an overall decorative effect pleasing to children.
